

Heading -Methods in India or Produce More

Methods Workshop arrives in India and has now registered an Indian company **Methods Apparel Consultancy**

After a roaring success in Durban, Cape Town, Sri Lanka and 14 other countries worldwide Methods is now set to take over the consultancy needs of India's Apparel Export market with a storm.

The aim is to provide specific industry-related production consultancy services, training and high-technology solutions. The Consultancy Services, Software systems and training programmes cover all areas of the factory from Raw Materials through to Dispatch in the apparel sector.

'Methods' comes with more than 25 years of rich experience and with an 8 member team and are looking to further expansion with the increasing response and interest levels that they are receiving with each passing project.

Spearheaded by Mr. Roger Thomas the Methods team consists of highly skilled and professional members who not only have relevant expertise in the field of consultancy but are experts in their specific area.

Methods Consultancy India is divided into two divisions, the first providing software solutions and consultancy services to the garment industry and the second is providing training to the upcoming professionals in the garment field helping the industry to get the professional standing that it has long deserved.

Projects already on in the Indian sub continent include eminent names like – Pee Empro , Orient Fashions, Gokaldas exports, Mahajan Overseas, Shahi exports, Modelama, Matrix and Royal Embroidery.

Added to these successful projects, Roger Thomas has conducted various seminars around the country on various topics to increase productivity through good global practices, for example Production Planning, Operator training, Supervisors training, Work-study and Line Balancing. All of which were well appreciated by the industry professionals.

Methods Apparel Consultancy are official consultants to the AEPC in India and are spearheading changes in the ATDC training courses and have trained their faculty to teach their Work Study course, which has now been added to their curriculum.

"Methods" is now a name which has carved a significantly important place in the Indian industry within the short time span of less than 2 years.

The reason for this kind of phenomenal success rate is setting international standards in the local work environments. It is not only about establishing and promising minimum levels of productivity increase but also ensuring that such claims are kept alive for years to come once the project is finished.

Future projects involve training programs at various levels of the industry starting from 'Supervisor training' program for the grass root level workers to 'line balancing' 'Production planning' and "Garment Engineering" for the professionals dealing with day to day issues in the factories.

Methods is on a continuous evolvement mode and is in the process of developing new programs like Management Communications and Merchandising Development to cater to the ever evolving needs of the industry. On the industrial front Methods have signed up a 30 factory contract with the AEPC for the installation of some of its software programs which includes the determination of correct standard minute values and the installation of a Bar-coded system to monitor factory efficiencies and Work in Progress control. These projects have already gained a lot of acknowledgement in the apparel sector and have received immense financial backing from the AEPC.

Methods Apparel consultancy is a name which is here to stay. **Join or lose the race!**

Look out for this space in the forthcoming issues to have a glimpse of what Methods has to offer in terms of their software services and training packages.

Till then happy producing!

Pooja Makhija (Senior Consultant, Methods Apparel Consultancy, India)
